

Approval times can make or break your lending and F&I process.

Most service companies use outdated software to communicate with lenders via email and fax. In today's digital world there is no reason for it. Our platform is fully encrypted, fully compliant, and is a "real time" instant connection to most lenders. What that means to you is that your customers will see much faster approvals and expedited communication. Not to mention they will also expect it! Emails and faxes are electronic but are not integrated into any lenders approval process. When a person is busy, how often do they ignore email and fax until they can get to it? Pretty regularly and it will slow your deal down considerably. Our system is tied into the lenders operating system and both sides are real time.

To speed up the approval process and give your customers quicker decisions give us a call!
